

Steps to creating e-Portfolio

- Create a folder named e-Portfolio
- Locate 2 websites you created in this class, Test 1 Real Estate, & Test 2 Flower shop.
- Put these 2 folders in your e-Portfolio folder being sure to leave the files for each of these websites in their respective folders [I will refer to them as Sample 1, 2]
- Create a resume file and name it as resume.html Save it to your eportfolio folder.
- Create the file index.html file which will be your e portfolio Home page; be sure to make it inviting and appealing so that the viewer is motivated to look at the rest of your e-Portfolio
- Next, you will be creating a Navigation bar which will appear on all index pages (real estate/flowershop/additional website) and your resume page. You will be dealing with multiple index.html files: the index file in the root folder of your e-Portfolio folder as well as the index file in each of your sample folders.

Suggestions for creating the Navigation bar on ALL PAGES!!!

- Refer to the attached demo e-Portfolio
- Look at the index files and the resume pages
- Note the navigation on each page
- From the index page of the e-Portfolio root folder, you link to the resume page as ` Resume `
- You link to each of the index files in the sample folders as follows:
`Flower Shop`
- From the index page of one of the Sample folders, you have to “backup” a level to get to the root of the e-Portfolio folder. The “backup” is represented with ..
- To go from the index file of the Sample 1 folder to the index file of the e-Portfolio, you would code ` Home `
- To go from the index file of the Sample 1 folder to the resume file of the e-Portfolio, you would code `Resume`
- To go from the index file of the Sample 1 folder to the index file of the Sample 2 folder, you would code `Sample 2`
